Increase Completion Rates

The interactive survey tool sets a new standard for engagement by providing students with real-time visualizations and comparative data with each response. Integration with Handshake's platform also increases response rates by using the student's job application history to reduce completion time.

Export and Share Reports

Unlike most surveys that provide only raw data, Handshake's FDS uses data visualization that can be easily exported and shared. Reports comply with NACE and NUBS requirements.

Engage Passive Job Seekers

Re-engage frustrated responders by providing automated access to job postings and resources relevant to their interests. Our survey empowers them to be successful in their continued search for the right opportunity.

View Real-Time Results

View completion rates, engagement scores, placement information, and other key metrics on the modern administrative dashboard that is compatible with most any device.
